

C++ Programming for C Programmers

Duration: (Face-to-Face & Remote-Live), or 28 Hours (On-Demand)

Price: £1,645 (Face-to-Face & Remote-Live), or £1,145 (On-Demand)

Discounts: For multiple course purchases, please [contact us](#) for applicable discounts.

Delivery Options: Perform training at your own pace via our [on-demand training](#) option or attend regularly scheduled live courses via [remote-live attendance](#).

Students Will Learn

- Writing procedural programs using C++
- Using `private`, `public` and `protected` keywords to control access to class members
- Defining a class in C++
- Writing constructors and destructors
- Writing classes with `const` and `static` class members
- Overloading operators
- Implementing polymorphic methods in programs
- Writing programs using file I/O and string streams
- Using manipulators and stream flags
- to format output
- Using the keyword `template` to write generic functions and classes
- Writing programs that use generic classes and functions
- Writing programs that use algorithms and containers of the Standard Library
- Using algorithms and containers of the Standard Library to manipulate string data
- Using `try()` blocks to trap exceptions
- Using `catch()` blocks to handle exceptions
- Defining exceptions and using `throw` to trigger them

Course Description

This hands on C++ training course presents a thorough introduction to object-oriented programming in C++ for experienced C programmers. The central concepts of C++ syntax and style are taught in the context of using object-oriented methods to achieve reusability, adaptability and reliability. Emphasis is placed on the features of C++ that support abstract data types, inheritance, and polymorphism. Students will learn to apply the process of data abstraction and class design. Practical aspects of C++ programming including efficiency, performance, testing, and reliability considerations are stressed throughout. Comprehensive hands on exercises are integrated throughout to reinforce learning and develop real competency.

Course Prerequisites

Prior programming experience with C.

Course Overview

Moving from C to C++

- New Compiler Directives
- Stream Console I/O
- Explicit Operators
- Standard Libraries
- Data Control Capabilities

Functions

- Function Prototypes and Type Checking
- Default Function Data Types
- Function Overloading
- Problems with Function Overloading
- Name Resolution
- Promotions and Conversions
- Call by Value
- Reference Declarations
- Call-by-Reference and Reference Types
- References in Function Return
- Constant Argument Types
- Conversion of Parameters Using Default Initializers
- Providing Default Arguments
- Inline Functions

Dynamic Memory Management

- Advantages of Dynamic Memory Allocation
- Static, Automatic, and Heap Memory
- Free Store Allocation with `new` and `delete`
- Handling Memory Allocation Errors

Inheritance

- Inheritance and Reuse
- Composition vs. Inheritance
- Inheritance: Centralized Code

Handling Data

- New Declaration Features
- Initialization and Assignment
- Enumerated Types
- The `bool` Type
- Constant Storage
- Pointers to Constant Storage
- Constant Pointers
- References
- Constant Reference Arguments
- Volatile Data
- Global Data

Creating and Using Objects

- Creating Automatic Objects
- Creating Dynamic Objects
- Calling Object Methods
- Constructors
- Initializing Member consts
- _INITIALIZER List Syntax
- Allocating Resources in Constructor
- Destructors
- Block and Function Scope
- File and Global Scope
- Class Scope
- Scope Resolution Operator `::`
- Using Objects as Arguments
- Objects as Function Return Values
- Constant Methods
- Containment Relationships

Controlling Object Creation

- Object Copying and Copy Constructor
- Automatic Copy Constructor
- Conversion Constructor

Streaming I/O

- Streams and the `iostream` Library
- Built-in Stream Objects
- Stream Manipulators

- Inheritance: Maintenance and Revision
 - Public, Private and Protected Members
 - Redefining Behavior in Derived Classes
 - Designing Extensible Software Systems
- Syntax for Public Inheritance
- Use of Common Pointers
- Constructors and Initialization
- Inherited Copy Constructors
- Destructors and Inheritance
- Public, Protected, Private Inheritance
- Stream Methods
- Input/Output Operators
- Character Input
- String Streams
- Formatted I/O
- File Stream I/O
- Overloading Stream Operators
- Persistent Objects

Introduction to Object Concepts

- The Object Programming Paradigm
- Object-Oriented Programming Definitions
- Information Hiding and Encapsulation
- Separating Interface and Implementation
- Classes and Instances of Objects
- Overloaded Objects and Polymorphism

Strings in C++

- Character Strings
- The String Class
- Operators on Strings
- Member Functions of the String Class

C++ Program Structure

- Organizing C++ Source Files
- Integrating C and C++ Projects
- Using C in C++

Polymorphism in C++

- Definition of Polymorphism
- Calling Overridden Methods
- Upcasting
- Accessing Overridden Methods
- Virtual Methods and Dynamic Binding
- Virtual Destructors
- Abstract Base Classes and Pure Virtual Methods

Declaring and Defining Classes

- Components of a Class
- Class Structure

Templates

- Purpose of Template Classes
- Constants in Templates
- Templates and Inheritance
- Container Classes
- Use of Libraries

Exceptions

- Types of Exceptions
- Trapping and Handling Exceptions
- Triggering Exceptions
- Handling Memory Allocation Errors

Reliability Considerations in C++ Projects

- Function Prototypes
- Strong Type Checking
- Constant Types
- C++ Access Control Techniques

Multiple Inheritance

- Derivation from Multiple Base Classes
- Base Class Ambiguities
- Virtual Inheritance
 - Virtual Base Classes
 - Virtual Base Class Information

Operator Overloading

- Advantages and Pitfalls of Overloading
- Member Operator Syntax and

- Class Declaration Syntax
- Member Data
- Built-in Operations
- Constructors and Initialization
- Initialization vs. Assignment
- Class Type Members
- Member Functions and Member Accessibility
- Inline Member Functions
- Friend Functions
- Static Members
- Modifying Access with a Friend Class

Examples

- Class Assignment Operators
- Class Equality Operators
- Non-Member Operator Overloading
- Member and Non-Member Operator Functions
- Operator Precedence
- The this Pointer
- Overloading the Assignment Operator
- Overloading Caveats

The Standard Template Library

- STL Containers
- Parameters Used in Container Classes
- The Vector Class
- STL Algorithms
- Use of Libraries
