

Node.js Application Development

Duration: (Face-to-Face & Remote-Live), or 28 Hours (On-Demand)

Price: £1,645 (Face-to-Face & Remote-Live), or £1,145 (On-Demand)

Discounts: For multiple course purchases, please [contact us](#) for applicable discounts.

Delivery Options: Perform training at your own pace via our [on-demand training](#) option or attend regularly scheduled live courses via [remote-live attendance](#).

Students Will Learn

- Installation and configuration of Node.js
- Using `npm` to install and manage modules
- Working with the V8 Engine
- Building HTTP servers and HTTP clients
- Synchronous and asynchronous design patterns
- Building Node.js applications
- Storing application data in NoSQL databases
- Working with Web application frameworks such as Express
- Testing and Debugging Node.js applications
- Using Node.js core modules
- Using the Node.js event system and event emitters
- Interacting with the file system using buffers and streams
- Using Node.js networking API's to build internetworked applications
- Creating and consuming RESTful Web services

Course Description

This hands on Node.js course will teach front end designers and server side developers how to rapidly create, maintain, and deploy Node.js applications. This course includes thorough coverage of the Node.js architecture, the V8 engine and the Node Ecosystem. The course takes a practical approach to creating and organizing Node.js applications using functions and modules as part of the Node.js organizational structure. This course will provide attendees with a comprehensive understanding of Node.js core modules and how to procure and install packages using `npm`. Attendees will learn to identify and correct problems through unit testing and exception handling.

Attendees will learn how to use Node.js to create Command Line Interface applications for system administration and process management, use Node.js networking modules to communicate with TCP/IP clients and servers such as HTTP servers, and create / consume REST (Representational State Transfer) data services. Attendees will learn how to leverage frameworks such as Express to rapidly build Web Applications. Attendees will learn how to

use Node.js to connect to NoSQL databases such as MongoDB to store, retrieve, and manipulate data (i.e., achieve data persistence).

Comprehensive hands on exercises are integrated throughout to reinforce learning and develop real competency.

Course Prerequisites

Knowledge of JavaScript equivalent to attending the [JavaScript Programming](#) course. Attendees should also have familiarity with a Windows, Linux, or OS X command line interface as well as a basic understanding of network protocols such as HTTP.

Course Overview

About Node.js

- Server Side JavaScript
- The Event Loop
- Asynchronous Execution
- `npm`
- Node.js Architecture
- Node.js Core Modules
- Node.js Projects and Applications
- Node.js Command Line Arguments

ES6 Enhancements

- Arrow Functions
- `let` and `const` Keywords
- Enhanced Object Literals
- Map and Set Collections
- `WeakMap` and `WeakSet` Collections
- String Template Literals

Programming Fundamentals with Node.js

- Using Modules to Organize Code
 - Creating and Reusing Code with Modules
- Asynchronous Programming Fundamentals
- Using Callbacks to Handle Events
- Using `EventEmitters` to Handle Repeating Events
- Type Testing with the `util` Module
- The Node.js Module Loading System
- Module Caching

System and Data Interaction With Node.js

- Interacting with the System Using the `os` Module
- Working with the File System Using the `fs` and `path` Modules

Node.js Global Environment

- Timers
- Global Objects
- The `process` Object
- Buffers and Buffer Manipulation

Installation and Configuration

- Node.js
- `npm`
- Express
- MongoDB
- Mongoose

Unit Testing and Debugging with Node.js

- Implementing Unit Tests with the `Assert` Module
- Test Driven Development with `Nodeunit`
- Behavioral Testing with Mocha
- Facilitating Debugging with the `Console` Module
- Working with the Node.js Debug Utility

- Data Persistence Mechanisms
- MongoDB Capabilities
- Connecting to MongoDB
- Using the `fs` Module to Read and

- Managing Data Flow with Pipes and Streams
- Synchronous vs. Asynchronous File System Interaction
- Using Buffers to Read and Manipulate Binary Data
- Handling and Transforming File Path Information with the `path` Module
- Spawning and Managing Processes using the `process` Module

Write Files Synchronously and Asynchronously

Web Application and Network Programming

- Using Express to Rapidly Build and Deploy Web Applications
- REST-Based Web Service Fundamentals
- Creating HTTP Servers and Clients Using the `http` Module
 - Sending HTTP Requests and Receiving HTTP Responses
- Making DNS Requests with the `dns` Module
- Creating TCP Clients and Servers with the `net` Module

Process Management with the `process` Module

- Executing External Applications
- Attaching and Detaching Child Processes
- Facilitating Inter-Process Communication between Node.js Processes
- Making Node.js Applications Executable

Creating Modules

- Planning Modules
- Working with the `package.json` File
- Working with Dependencies
- Understanding Semantic Versioning
- Testing Modules
